1.4 使用注意事项 Application Notes

- a. 在传感器的焊接、安装、使用等过程中，应避免光学气室承受任何方向的压力；在操作时应采用防静电措施。During the soldering, installation, and use, avoid the optical chamber from pressure/stress in any direction; take ESD precautions during handling.
- b. 锡焊焊接时，温度设置须低于380 °C，尽量保证焊接时间小于3秒。选择性波峰焊可能导致热应力和光学气室形变，在工艺开发时应做充分验证。When performing tin soldering, set the temperature below 380 °C, and the soldering time shall be less than 3 seconds as far as possible. Selective wave soldering may cause thermal stress and optical chamber deformation, which should be carefully qualified when conducting process development.
- c. 确保传感器通风良好，勿遮挡气体扩散孔（防水透气膜）。如在风道中，避免气流直吹气体扩散孔。传感器应避免阳光直射和热辐射。Ensure that the sensor is well ventilated and the air diffusion holes (particle filter) are not blocked. For example, avoid blowing direct airflow at the air diffusion hole when placing the sensor in the air duct. Protect sensor from direct sunlight and thermal radiation.
- d. 应避免接触腐蚀性气体，以免传感器性能和可靠性退化。Avoid exposure to corrosive gases as it would lead to sensor performance and reliability degradation.
- e. 传感器出厂默认开启自校准功能，默认校准周期是72小时。如传感器工作在长期不通风的环境中，请通过指令关闭自校准功能。The auto-calibration function is enabled by default, and the default calibration period is 72 hours. If the sensor works in an unventilated environment, turn off the self-calibration function by sending a command.
- f. 通过引脚或校准命令进行手动校准时，传感器须在稳定的气体环境(例如0% LEL)下连续工作2分钟以上。When perform manual calibration with the pin or the calibration command, the sensor shall operate continuously for more than 2 minutes in a stable gas environment (e.g., 0% LEL).
